The calculus of communicating systems (CCS) is a process calculus introduced by Robin Milner around 1980 and the title of a book describing the calculus. Its actions model indivisible communications between exactly two participants. The formal language includes primitives for describing parallel composition,... (PDF) A Calculus of Broadcasting Systems. - ResearchGate Introduction This paper presents a new version of a calculus of broadcasting systems, CBS [Pra91b], a CCS-like calculus [Mil89] with broadcast communication instead of handshake. (PDF) A Temporal Calculus of Communicating Systems. In this paper, we extend the theory of TCCS, the authors' Temporal Calculus of Communicating Systems, with a behavioural congruence which abstracts away internal communications. Calculus of Communicating Systems | SpringerLink CCS deals with communication behaviours of (non-deterministic) finite state machines. Among the first publications on CCS is... The Calculus of Communicating Systems (CCS) originates from Robin Milner. Communicating and Mobile Systems: the π -Calculus It was shown to represent not only interactive concurrent systems, such as communications protocols, but also much of what is familiar in traditional computation e.g. data structures and storage regimes. In fact the calculus was used to give a rigorous definition of a fairly powerful concurrent programming language. $x = 1$ let $x = 1$ in $x(1)$. $!x(1)$ $x.set(1)$ - Uni Koblenz-Landau – CCS: Calculus of Communicating Systems. – Various revisions and elaborations. – Later extended to mobile processes (π -calculus). •Algebraic approach – Concurrent system modeled by term. – Theory of term manipulations. – Externally visible behavior preserved. •Observation equivalence – External communications follow same pattern. – Internal behavior may differ.
